## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. **Claims 1-9** are allowed.
2. The following is an examiner's statement of reasons for allowance: Bolgiano et al. teach a wireless telephone distribution system with time and space diversity transmission for determining receiver location. The prior art of record does not teach time space measuring means for measuring time spaces between sampled values of a delay profile sampled along a delay time axis; leading position detecting means for detecting a position of a sampled value immediately after a maximum time space from among time spaces measured by said time space measuring means as a leading position; and a leading wave position detecting means for detecting an initial peak position of the sampled values after the leading position detected by said leading position detecting means as a leading wave position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bolgiano et al. teach a wireless telephone distribution system with time and space diversity transmission for determining receiver location. Forsythe et al. teach a multichannel multiuser detection. Mendez et al. teach a wavelength

division multiplexing/code division multiple access hybrid. Antonio et al. teach an adaptive sectorization in a spread spectrum communication system.
